

# Security and Resiliency Guide

## Counter-Improvised Explosive Device (C-IED)

### Annex for Outdoor Events Stakeholders

Homeland  
Security

# Introduction

## Purpose

Bombings using improvised explosive devices (IEDs) are a common security concern related to terrorism and violence in the United States (U.S.). High-profile domestic incidents have occurred and international attacks are frequently in the news. Outdoor events venues are not immune from IED incidents, including bomb threats, suspicious items, and actual bombings.

This guide defines tasks and related processes that security managers and staff at outdoor events venues can use to understand and improve their ability to perform counter-IED (C-IED) activities and make decisions. This guide is designed to provide security managers and staff at outdoor events venues with:

- 1) A practical framework to examine their ability to perform C-IED activities, and
- 2) Supporting guidance and materials to strengthen their C-IED preparedness.

As each outdoor event facility is unique in size, complexity, and location, no specific guidance can apply to all. For that reason, the information provided in this guide is meant to provide suggestions and examples of what others are doing as options for facilities to consider to enhance their C-IED preparedness.

## Background

The U.S. Department of Homeland Security (DHS) Office for Bombing Prevention (OBP) plays a key role in coordinating efforts with the public and private sectors, including outdoor events venues, to build capabilities to prevent, protect against, respond to, and mitigate bombing incidents. To assist stakeholders with enhancing preparedness for IED incidents, OBP and other U.S. Government stakeholders developed the *Security and Resiliency Guide: Counter-IED Concepts, Common Goals, and Available Assistance* (SRG C-IED). The SRG C-IED is a consolidated reference guide of C-IED preparedness information for homeland security stakeholders. It provides an overview of IED threats, a set of common C-IED goals, associated objectives, and practices, as well as links to Federal government C-IED resources.

This Guide is an annex to the SRG C-IED developed to support the specific needs of outdoor events facilities. Outdoor events representatives, including security managers from several venues, outdoor events, and event planning organizations, participated in its development to ensure the Annex reflects common operating procedures and the most significant security concerns. Major associations and working groups also participated, including the Smithsonian Folklife Festival, Sports Backers, Six Flags America, Universal Studios, the Delaware State Fair, and the Sturgis Motorcycle Rally. DHS conducted workshops to gain insight into security best practices, gaps, and potential products that would support C-IED preparedness for the Outdoor Events Subsector.

### Benefits of the guide to the outdoor events community

This guide provides useful information to security managers and staff as they seek to improve preparedness at their venues. Through this guide, security managers and staff can:

- Gain a better understanding of their existing C-IED practices and needs;
- Obtain information to support preparedness efforts, such as risk assessments, planning, equipment purchases, and staff training; and
- Collaborate and communicate more effectively with their venue counterparts, community first responders and government agencies.

# Introduction

## Definitions

The following definitions may be useful to outdoor event security managers and staff as they read this guide, examine their ability to perform C-IED activities, and make decisions to prevent, protect against, mitigate, and respond to IED-related threats.

- **IED:** A device placed or fabricated in an improvised manner incorporating destructive, lethal, noxious, pyrotechnic, or incendiary chemicals and designed to destroy, incapacitate, harass, or distract.
- **IED Incident:** Any event that involves a real or suspected IED threat, including IED detonations, bomb threats, the use of hoax devices, discovery of bomb-making components, or the theft of explosives or precursor materials.
- **Countering IEDs:** The interdisciplinary process for developing, implementing, evaluating, and adjusting measures to prevent, discover, protect against, mitigate, respond to, and recover from IED incidents and their consequences.

## C-IED goals

There are 10 common C-IED goals outlined in the SRG C-IED. These goals serve as benchmarks that stakeholders can review and consider for implementation in support of reducing the overall risk posed by IED threats.

### Goal

1. **Use and share risk information to guide IED-related physical security, law enforcement, and emergency response activities.**
2. **Identify and report IED-related suspicious activity.**
3. **Prevent the acquisition of explosives and explosive precursor chemicals used in IEDs.**
4. **Implement site-specific protective measures to prevent and minimize the impact of IED incidents.**
5. **Utilize IED screening and detection methods in high-risk environments.**
6. **Take immediate safety precautions for bomb threats, suspicious items, and IEDs.**
7. **Safely coordinate response activities at IED incident sites.**
8. **Request Public Safety Bomb Squad assets to diagnose suspicious items and render-safe IEDs.**
9. **Provide IED-specific emergency medical response.**
10. **Reduce the psychological and economic impacts of IED incidents.**

# Introduction

The C-IED tasks in this guide align to six out of the ten C-IED goals in the table above:

**Goal 1: Use and share risk information to inform IED-related physical security, law enforcement, and emergency response activities.** The C-IED tasks in this category include the activities by which outdoor events personnel use and share information to improve coordination between stakeholders.

**Goal 2: Identify and report IED-related suspicious activity.** The C-IED tasks that align to this goal include the activities to help increase awareness and preparedness for identifying and communicating IED-related suspicious activity.

**Goal 4: Implement site-specific protective measures to prevent and minimize the impact of IED incidents.** These C-IED tasks include the activities by which outdoor events personnel strive to deter IED threats and protect against an IED attack to their events.

**Goal 5: Utilize IED screening and detection methods in high-risk environments.** These C-IED tasks discuss various screening and detection methods that outdoor events personnel can utilize to identify and prevent IEDs and IED components from entering into outdoor events venues.

**Goal 6: Take immediate safety precautions for bomb threats, suspicious items, and IEDs.** These C-IED tasks include the activities by which outdoor events personnel can effectively respond to IED threats to their events in support of increasing safety, minimizing potential disruptions, and assisting law enforcement and first responders.

**Goal 7: Safely coordinate response activities at IED incident sites.** These C-IED tasks include activities by which outdoor events personnel can effectively and safely react at the IED incident site.

Property of DHS*

# Introduction

## Subsector definition

The Outdoor Events Subsector is comprised of entities that provide the public with a place to meet and gather in outdoor spaces for the purposes of entertainment, education, and recreation (e.g., theme parks, amusement parks, fairgrounds, festivals, parades, and marathons), although there are usually buildings (e.g., restaurants, snack bars, hotels, shops, barns, and exhibition halls) associated with the activity.<sup>1</sup>

## Outdoor events stakeholders

For the purposes of this guide, outdoor events stakeholders include the following:

- **Visitors:** Any person visiting the outdoor event, including patrons attending an event, traveling performers, and any associated support staff for traveling performances or exhibits.
- **Security/Management:** Employees or contract staff responsible for ensuring the safety of staff and visitors.<sup>2</sup>
- **Public-Facing Staff:** Employees, contract staff, or volunteers who come into contact with visitors (e.g., staff who greet visitors, sell and validate tickets, and vendors).
- **Facilities/Engineering:** Employees or contract staff responsible for engineering, maintenance, deliveries, and cleaning.
- **Internal Support Staff:** Employees or contract staff responsible for day-to-day administration (e.g., office staff, technicians).

*Figure 2: Outdoor event stakeholders

<sup>1</sup> (Commercial Facilities Sector-Specific Plan - An Annex To The NIPP 2013 2015)

<sup>2</sup> For events without full-time security managers, these activities would likely be accomplished by the event manager.

# Outdoor Events Subsector C-IED Goals

## Assess IED risk

Knowing and understanding the specific risks to outdoor events from IEDs is a necessary first step to selecting and prioritizing the C-IED tasks presented in this guide.

Risk is generally defined as the potential for an unwanted outcome from an incident as determined by its likelihood and consequences.<sup>3</sup> A C-IED risk analysis should address two core questions:

- How likely is it that an IED threat or detonation will occur?
- If an IED threat or detonation occurred, what would the consequences be?

As an example, a prominent amusement park or marathon may be an attractive target for attackers because of the high number of people present at any given time and the psychological importance placed on the event. However, a festival or race in a mid-size city, which likely has less restrictive security requirements, may be easier targets for attackers. As a result of these different risk factors, the prominent amusement park or parade will have different priorities than the festival or marathon in a mid-size city, which will affect the decisions that the security managers for each of these events will make to strengthen the C-IED tasks outlined in the next section.

## IED threat considerations

Consider how the likelihood of an IED incident would affect the approach to implementing the C-IED tasks. Threat scenarios to consider include the following:

- **Steady-state IED threat** environment that exists on a day-to-day basis.
- **Elevated IED threat** to an outdoor event based on credible intelligence analysis. For example, a law enforcement agency informs event managers that there is a threat to events in their city posted to a known terrorist recruiting Website.
- **Credible IED threat** to a specific outdoor event based on the identification of a suspicious object or a bomb detonation. For example, an unattended package with wires protruding suspiciously is found near the entrance gates to an amusement park or near the finish line of a marathon.

---

<sup>3</sup> (Risk Steering Committee 2015)

# Outdoor Events Subsector C-IED Goals

Figure 3: Example actions in response to a changing threat environment  
Property of DHS

Furthermore, any change in the likelihood of an IED incident, such as a credible threat to outdoor events in a particular city, will affect the actions staff take to implement C-IED tasks (see Figure 3). For example, day-to-day operations during the steady-state IED threat environment for an outdoor event may mean visually screening patrons as they enter the event space. However, if there is a credible threat, venues may work together with law enforcement to randomly screen patrons. The decision on what specific security requirements to implement, if any, may depend on the availability of resources, the associated costs of those resources, the impact to visitors, and visitors' willingness to accept an additional burden to enter the venue.

This section outlines examples of C-IED tasks that outdoor event security managers and staff can implement to prevent, protect against, mitigate, and

respond to bomb threats and incidents. Descriptions of each C-IED task include examples from industry documents and discussions with stakeholders that summarize a spectrum of approaches for security managers to consider, based on risks to their respective event, their mission, and available resources as they build and/or improve C-IED preparedness over time. Following this section are three appendices:

- **Appendix 1** provides a broader list of C-IED tasks, to include the example tasks outlined below, in an operational checklist format for venues to use to self-assess their preparedness.
- **Appendix 2** lists resources available to outdoor events to build and improve their C-IED preparedness.
- **Appendix 3** lists the references used to develop this guide.

# Outdoor Events Subsector C-IED Goals

## Goal 1 – Use and share risk information to guide IED-related physical security, law enforcement, and emergency response activities.

The following C-IED tasks include the activities that outdoor event security managers and staff can utilize to recognize and assess risks from IEDs.

### Assess risk of an IED incident.

Assess the likelihood and consequences of an IED incident that directly impacts a) the outdoor event and b) adjacent facilities such as hotels and arenas. A number of resources are available to support risk assessment of an IED incident, including the following:

- Local bomb technicians, who are part of local fire or law enforcement agencies;
- DHS Protective Security Advisors (PSAs);<sup>4</sup>
- Local emergency managers, as part of their ongoing Threat and Hazard Identification and Risk Assessment (THIRA) process; and
- Local, regional, or state fusion centers.<sup>5</sup>

Be aware of new circumstances or information that may increase or decrease the threat of an IED, such as high-profile or controversial events, visiting dignitaries, and National Special Security Events.

### Monitor and share IED-related security information.

Establish relationships with government and industry stakeholders to maintain the routine exchange of IED-related security information—including alerts, attack indicators and warnings, and advisories. Some examples of these partnerships include the following:

- Private sector liaisons from law enforcement agencies;
- Local emergency management agencies;
- Local, regional, or state fusion centers;
- DHS PSAs;

#### Example

Incorporate “alert levels” into event emergency plans. These levels can be tied to local or federal advisory systems, such as the National Terrorism Advisory System, or to criteria defined by the event. The plan can also outline specific protective actions, staffing, and procedure decisions for each level (e.g., additional screening practices or augmenting security staff during an elevated alert).

#### Example

Share information with stakeholders about new and emerging threats, as well as best practices and recommendations for mitigating those threats. For example, drones are currently a significant area of concern for event security managers across all outdoor event types.

<sup>4</sup> PSAs are DHS representatives whose mission is to protect critical infrastructure through engagement with private sector stakeholders. For more information, see <https://www.dhs.gov/protective-security-advisors>.

<sup>5</sup> For more information about fusion centers, see <https://www.dhs.gov/state-and-major-urban-area-fusion-centers>.

# Outdoor Events Subsector C-IED Goals

- Neighborhoods, communities and business associations; (e.g., Southern California Attractions<sup>6</sup>); and
- National associations (e.g., International Association of Fairs & Expositions, the UltraMarathon Cycling Association, and Studio Security Chiefs group).

If the threat is elevated, provide additional information about the potential threat during daily staff and volunteer meetings. Additionally, visitors tend to be more accepting of security measures when they know that there is an elevated threat. Therefore, during circumstances when the threat is elevated, provide updated information and guidance to visitors more often and more visibly, using posters, public service announcements, and monitors, for example.

## Goal 2 – Identify and report IED-related suspicious activity.

The following C-IED tasks include the activities that outdoor event security managers and staff at outdoor events can employ to efficiently recognize and report IED-related suspicious behaviors and items.

### Educate all staff and visitors to understand potential IED threats.

Train all employees and volunteers to recognize and report suspicious behavior and objects that could be associated with IEDs. For example, training for staff who work at entrances to festivals or the starting line of a marathon could address what to do when they observe an unattended bag, as well as examples of suspicious behavior (e.g., someone who leaves a bag and then exits the event space). In addition, educational materials (e.g., posters and signs) and checklists can help employees and volunteers, as well as visitors (e.g., patrons and personnel associated with traveling performances and events), recognize and report suspicious activities and objects that could be associated with IEDs.

#### Example

Incorporate C-IED educational material into other emergency information and materials provided to staff and visitors. Consider developing checklists, information cards, lanyards, pamphlets, and/or smart-phone applications to help staff and visitors remember C-IED activities and responsibilities.

If the threat is elevated (e.g., following an attack that occurred at an outdoor event overseas), consider issuing reminders during scheduled staff and volunteer meetings. DHS has developed a wide variety of materials, such as training videos, posters, and checklists, that outdoor event managers can use to supplement their IED training efforts. See Appendix 2 for a list of available resources.

---

<sup>6</sup> Southern California Attractions is a security organization for theme parks, sports stadiums, and the Palm Springs tram in Southern California that meets twice a year.

# Outdoor Events Subsector C-IED Goals

## **Recognize out-of-place and suspicious behavior.**

Be mindful of out-of-place and suspicious behaviors that may indicate planning or execution of an IED attack. Some examples of suspicious behaviors include the following:

- Suspicious or illegally parked vehicles near a high pedestrian traffic area;
- Wearing unusually bulky clothing that is inconsistent with weather conditions and might conceal explosives; and
- Attempting to access restricted areas or entrances as patrons are exiting.

If the threat is elevated, use staff meetings to reinforce recognition of out-of-place and suspicious behaviors. See Appendix 2 for more information on recognizing suspicious behavior.

## **Recognize IED components and explosive precursors.**

Be aware of common IED components, such as wires, timers, and triggers, and be able to recognize them around the event space in areas such as choke points along parade or marathon routes (e.g., finish line), exterior walls of buildings within the event space, and pedestrian gathering areas. In addition, be familiar with explosive precursors, many of which are common household items, when they are in unexpected places or are unexpectedly missing from storage areas. Some common chemicals likely found in outdoor events that could be used as IED precursors include the following:

- Drain cleaners;
- Paint remover;
- Sanitizers;
- Fertilizer; and
- Batteries.

Additionally, maintain control over the storage areas for any explosive materials (e.g., some venues may store fireworks or propane tanks) to ensure access only by authorized personnel. If the threat is elevated, use staff and volunteers in meetings to reinforce recognition of IED components and explosive precursors. For more information on IED components and precursors, see Appendix 2.

## **Report any potential IED-related information to appropriate authorities.**

Establish procedures for visitors and staff to report information to security personnel on suspicious behaviors that could be associated with IEDs and potential IED threats. Some examples include targeted surveillance of an outdoor event, unattended packages at choke points of marathons or parade routes, or vehicles illegally parked near an entrance or high-traffic pedestrian areas. If the threat is elevated, reinforce these reporting procedures during staff meetings and with public service announcements. For more information on responses to suspicious behavior, see Appendix 2.

# Outdoor Events Subsector C-IED Goals

## Provide evidence and information from bomb threats to local law enforcement.

Contact local law enforcement with IED-related information ranging from suspicious activity that may be of interest to law enforcement to a credible IED threat. Law enforcement agencies may request that event managers provide evidence (e.g., closed circuit television [CCTV] footage) supporting the IED-related information reports. For more information on reporting suspicious behavior to law enforcement, see Appendix 2.

### Example

Report all bomb threats to local law enforcement. With technological advancements, threats may be directed to multiple facilities and events nearly simultaneously, and the information can help responders build an accurate picture of the scope of the issue.

## Goal 4 – Implement site-specific protective measures to prevent and minimize the impact of IED incidents.

The following C-IED tasks include the activities that outdoor event security managers and staff can utilize to deter IED threats and better protect against an IED attack.

## Verify identity of full-time employees, temporary staff and performers, and volunteers.

Outdoor event managers typically conduct criminal and financial background checks on potential employees as part of the hiring process (unless local or state laws or union regulations prevent them from doing so). Imposing those requirements on traveling performers, their associated crews, and volunteers can be more challenging. Emerging technology to run rapid background checks, as well as searching social media accounts, could address this security gap.

### Example

Change the color and/or orientation of identification badges frequently to make it difficult to attempt to replicate or use old credentials to gain access into the event space.

Full-time employees and contract staff are typically required to wear identification badges, which should be revised regularly. More challenging are identification badges for temporary performers, their associated crews, and volunteers. Emerging technology to make single-use identification badges cheaply and quickly could address this security gap. If the threat is elevated, consider conducting an audit of identification badges and credentials to verify information is current and accurate.

## Conduct a security sweep of the event space before opening.

During the steady-state threat environment, a visual security sweep of the event space is often conducted prior to the start of the event. The extent of the security sweep varies widely across outdoor events, depending on resources, the scope of the event space, and risk assessment results. For example, local law enforcement is solely responsible for the security sweep for some events; others bring contract K9 units in to support the security sweep. If the threat is elevated, consider expanding the security sweep to include areas outside the event space, such as parking lots.

# Outdoor Events Subsector C-IED Goals

## Conduct continuous roving security patrols during events.

During the steady-state threat environment, event security personnel, as well as uniformed and non-uniformed law enforcement personnel, typically conduct roving security patrols during events. Security patrols should include an inspection of security barriers, such as locks, gates, and doors, for signs of intrusion, especially for high-risk areas that require extra security controls, such as security offices, mechanical and storage areas, and performance areas.

If the threat is elevated, consider expanding security patrols to include areas outside the event spaces, such as parking lots. Consider also increasing the frequency of security patrols during the event, depending on available resources.

## Implement facility-related security measures.

Identify and implement protective security features, such as perimeter lighting, fences, and secure storage for explosive materials and precursors (e.g., cleaning supplies and fireworks brought for a performance), based on identified vulnerabilities. In addition, consider installing vehicle or other physical barriers that provide effective standoff distance from potential IED attacks and implementing measures to mitigate the consequences of an IED detonation (e.g., opening entrances earlier to reduce the number of people congregating before events and installing blast-resistant windows and trash receptacles). For more information on security measures, see Appendix 2.

### Example

Wherever possible, remove trash receptacles from areas that are in high-traffic pedestrian areas and are likely to become choke points. Additionally, install clear trash receptacles so that staff can better monitor items that go into the bins.

## Goal 5 – Utilize IED screening and detection methods in high-risk environments.

The following C-IED tasks include the activities security managers and staff at outdoor events can utilize as screening and detection measures in outdoor events venues.

### Screen patrons and bags.

The extent of screening and inspection practices (e.g., visual cues and the use of hand-held or walk-through metal detectors) during the steady-state environment varies widely across outdoor events, depending on availability of resources, the type of event, risk assessment results, and the associated burden to patrons. For example, some outdoor events require tickets for patrons to enter the facility with security personnel screening patrons and inspecting bags, often with uniformed law enforcement officers in close proximity, while others have open access with numerous entry and exit points.

### Example

Educate visitors about event screening and inspection practices. When visitors are prepared, the screening process tends to proceed more quickly.

# Outdoor Events Subsector C-IED Goals

If the threat is elevated, consider developing approaches to increase the security presence and enhance screening and inspection practices, such as requesting armed law enforcement officers to post at entrances and exits, high-traffic pedestrian areas, or along choke points; using walk-through or hand-held metal detectors; instituting random screening and bag checks; and limiting what patrons can bring to the event.

## Screen incoming deliveries.

During the steady-state threat environment, outdoor event staff strive to conduct visual screening of deliveries, focusing on general recognition of anything suspicious that could be associated with IEDs, such as strange odors, ticking sounds, and protruding wires. If the threat is elevated, reinforce the importance of screening mail and other deliveries and reporting anything suspicious during daily staff and volunteer meetings. Consider implementing more comprehensive screening practices (e.g., undercarriage screening and use of K9 units), depending on availability of resources, especially for those deliveries arriving on the day of an event. Consider also reorganizing delivery schedules, so that deliveries are not accepted during or immediately before planned events. For more information on screening deliveries, see Appendix 2.

## Goal 6 – Take immediate safety precautions for bomb threats, suspicious items, and IEDs.

The following C-IED tasks includes the activities that outdoor event security managers and staff can utilize to respond to IED threats and support the local emergency response community following a successful detonation.

### Search for potential IEDs.

Standard practice upon receiving a bomb threat is to initiate a search of the entire event space to locate the potential bomb. If available, CCTV footage can aid in the search to determine, for example, if a suspicious package is merely an unattended bag or if it was left behind deliberately. CCTV can also actively be used to monitor crowds for suspicious activity. Emerging technology, such as geo-specific social media monitoring tools that allow users to monitor information being posted to social media sites from a specified location, can provide additional information to security managers and staff to support the search for potential IEDs.

If a potential IED is located through the search process, monitor the device, but do not touch it, until law enforcement arrives on scene. Importantly, limit the use of communication devices when searching for the IED, as the use of two-way radios and cell phones could trigger detonation of an actual device. Notify and coordinate with law enforcement for further instructions. For more information on search procedures, see Appendix 2.

### Example

Assign responsibilities to support an IED search to staff who are familiar with specific areas, as they will be most able to spot anything out-of-place. Ensure there is a method to communicate with staff and volunteers in the event of a credible bomb threat (e.g., text messaging). Include this information with educational and training materials.

# Outdoor Events Subsector C-IED Goals

## Determine and implement appropriate protective measures.

If an IED threat is determined to be credible, establish a cordon around the object to keep staff and visitors away from the area. Determine whether an evacuation is warranted, and if so, whether the entire event space needs to be evacuated or if a partial evacuation is sufficient (e.g., relocating visitors from one area of the event space to another). Identify an evacuation route that minimizes exposure to a potential blast. Ideally, inspect the chosen evacuation route and rallying point before notifying visitors of the need to evacuate.

### Example

Consider pre-assigning roles and responsibilities in case of an evacuation, or developing evacuation task lists that employees can implement during an evacuation.

BOMB THREAT STAND-OFF CARD				
Threat Description	Explosives Capacity	Mandatory Evacuation Distance	Shelter-in-Place Zone	Preferred Evacuation Distance
Pipe Bomb	5 lbs	70 ft	71-1199 ft	+1200 ft
Suicide Bomber	20 lbs	110 ft	111-1999 ft	+1700 ft
Briefcase/Suitcase	50 lbs	150 ft	151-1949 ft	+1950 ft
Car	500 lbs	320 ft	321-1999 ft	+1900 ft
SUV/Minivan	1,000 lbs	400 ft	401-2399 ft	+2400 ft
Small Delivery Truck	4,000 lbs	640 ft	641-3799 ft	+3800 ft
Container/Water Truck	10,000 lbs	850 ft	851-5099 ft	+5100 ft
Semi-Trailer	80,000 lbs	1570 ft	1571-9299 ft	+9300 ft

In the event of a successful IED detonation, strive to keep visitors within the event space if it is feasible and safe to do so, given the concern of secondary devices. If the decision is made to evacuate visitors, identify exit points as far from the blast as possible, and direct the evacuation accordingly.

For more information on IED evacuation distances, see Appendix 2.

Figure 4: Bomb Threat Stand-Off Card  
Source: DHS OBP

## Goal 7 – Safely coordinate response activities at IED incident sites.

The following C-IED tasks include the activities that security managers and staff at outdoor events venues can utilize to safely coordinate the response to IED threats at their facilities and support the local emergency response community following a successful detonation.

### Establish and operate a command structure during events.

Implement a command structure, guided by the incident command system (ICS),<sup>7</sup> as a means to organize and integrate outdoor event management and security staff with local, state, and federal agencies (e.g., local police, fire, and emergency medical services; state police and National Guard assets; and the Federal Bureau of Investigation [FBI]), who are also supporting an event. Define and document the command structure in the emergency operations plan or emergency action plan.

<sup>7</sup> For more information about ICS, see <https://www.fema.gov/incident-command-system-resources>.

# Outdoor Events Subsector C-IED Goals

## Implement emergency operations plan.

Develop and update an emergency operations plan to guide the response to an IED threat or successful detonation. At a minimum, the plan should outline procedures for the following activities:

- Reporting credible IED threats to local law enforcement;
- Searching for potential IEDs and what to do if one is located;
- Notifying appropriate personnel and agencies;
- Coordinating with first responders to ensure unity of effort;
- Providing information to visitors; and
- Executing emergency protective actions based on an identified IED threat.

For more information on threat and detonation responses, see Appendix 2.

*Figure 5: The Alfred P. Murrah Building following the 1995 bombing in Oklahoma City that killed 168 people and injured more than 500.  
Property of DHS*

## Share IED-related information in the event of an IED threat.

When responding to an IED threat, notify and provide information to local law enforcement and fire rescue agencies, attendees, and participants and team management.

- **Information to law enforcement and fire rescue agencies.** The types of information that security managers should expect to provide arriving law enforcement and fire rescue responders include the following:
  - Information collected on a bomb threat checklist;
  - Any suspicious activity or deliveries at the time the threat was made;
  - Information about the IED threat including whether the threat was made to a general phone number or a private number, the phone number that made the call, and exactly what the caller said;
  - Whether a search for the suspected IED has been conducted, and if so, the results of that search;
  - Size of any suspected IEDs located, as this will determine the area that will need to be cordoned off;
  - Event space aerial views, CCTV, and other electronic information that could be informative; and
  - Potential hazardous materials or chemicals that could affect responders or reduce the effectiveness of a K9 unit.

# Outdoor Events Subsector C-IED Goals

In addition, law enforcement officers will often want to speak with the person who received initial information about an IED threat, the manager (to learn about recent threats, firings, and any other employee issues), and the building engineer or facility manager.

- **Information to visitors.** Provide visitors with up-to-date information about a credible IED threat, especially given that some information about the IED threat and associated law enforcement presence is likely to be posted on social media. Consider also providing guidance to performers and their associated staff, especially for those who may be considered controversial, to increase security in and around hotels and while traveling to and from outdoor events (e.g., varying transportation routes).
- **Information to media.** Seek guidance with leadership/management and public relations staff to develop a media relations strategy and/or plan about an IED threat/or incident or suspected IED within the outdoor events to communicate with patrons/attendees/guests, staff, and any businesses or residential communities in the surrounding area. Utilize news and social media and other communication mediums to share important information, such as stand-off areas or evaluation plans, to law enforcement, emergency responders, and customers.

## Example

Be aware of any unique needs of visitors to outdoor events. For example, people with livestock at a fair will not want to leave without their animals. This could slow down evacuation time and make it more difficult to control the flow of people.

For more information on sharing IED-related information, see Appendix 2.

## Coordinate with responders and provide support for response operations following an IED detonation.

Following an IED detonation within or near the outdoor event, establish a command structure to coordinate all activities inside the venue, including the following:

- Prepare staging areas and triage points for arriving law enforcement, fire rescue, and emergency medical services responders;
- Initiate a security sweep to identify potential secondary devices;
- Implement a process to account for all employees;
- Clear and sweep exit routes to support evacuation of visitors; and
- Designate someone with authority to make decisions to support the responders' unified command, when it is established.

## Example

During the steady-state threat environment, invite first responders for a security walk-through or to train in the event space. This provides an opportunity for venue staff to coordinate with responders and for responders get a better idea of the layout.

Outdoor events occurring within the vicinity of an IED detonation but otherwise unaffected could also support response efforts. Examples include the following:

- Provide space and/or resources for a command post to direct response operations;
- Support medical services and triage; and
- Stage responder vehicles.

# Outdoor Events Subsector C-IED Goals

## Relationship between C-IED goals, tasks, and stakeholders

The following table shows the relationship between the C-IED goals and example tasks described in greater detail above and the stakeholder(s) responsible for addressing them.

C-IED Goals and Tasks	Stakeholder				
	Visitors	Security / Management <sup>8</sup>	Public-Facing Staff	Facilities / Engineering	Internal Support Staff
<b>Goal 1: Use and share risk information to guide IED-related physical security, law enforcement, and emergency response activities</b>					
Assess risk of an IED incident		X			
Monitor and share IED-related security information		X			
<b>Goal 2: Identify and report IED-related suspicious activity</b>					
Educate all staff and visitors to understand potential IED threats	X	X	X	X	X
Recognize out-of-place and suspicious behavior	X	X	X	X	X
Recognize IED components and explosive precursors	X	X	X	X	X
Report any potential IED-related information to appropriate authorities	X	X	X	X	X
Provide evidence and information from bomb threats to local law enforcement		X			
<b>Goal 4: Implement site-specific protective measures to prevent and minimize the impact of IED incidents</b>					
Verify identity of full-time employees, temporary staff and performers, and volunteers		X			X
Conduct a security sweep of the event space before opening		X		X	

<sup>8</sup> For events without full-time security managers, these activities would likely be accomplished by the event manager.

# Outdoor Events Subsector C-IED Goals

C-IED Goals and Tasks	Stakeholder				
	Visitors	Security / Management <sup>8</sup>	Public-Facing Staff	Facilities / Engineering	Internal Support Staff
Conduct continuous roving security patrols during events		X			
Implement facility-related security measures		X			
<b>Goal 5: Utilize IED screening and detection methods in high-risk environments</b>					
Screen patrons and bags		X	X		
Screen incoming deliveries		X		X

# Outdoor Events Subsector C-IED Goals

The following image presents tasks for countering IED threats at outdoor events facilities.

# Outdoor Events Subsector C-IED Goals

## Conclusion

Ensuring the safety of visitors, volunteers, and staff is a priority for all outdoor event facility owners and operators. By connecting with local authorities, developing plans to identify issues and support incident response, training employees, and reporting concerns to emergency authorities, many incidents may be mitigated or avoided. The preventive measures outlined in this report can help outdoor event facility owners and operators create a safer environment for their visitors, volunteers, and staff while maintaining an open and inviting atmosphere.

# Appendix 1: Outdoor Events Subsector C-IED

## Goals and Tasks Checklist

This appendix contains a version of the C-IED goals and tasks in a checklist format. Outdoor event security managers can use this checklist to evaluate their C-IED preparedness and identify areas for improvement. Security managers should consider the following instructions prior to beginning the evaluation of their C-IED preparedness:

- **Select Tasks.** Security managers should first identify which C-IED tasks are most relevant to their venue based on their assessment of the risk from IEDs.
- **Select participants.** Security managers are encouraged to engage a subgroup of employees representing a broad cross-section of functions to examine their C-IED processes and identify deficiencies.
- **Solicit responses.** Some tasks can be examined by one functional group; others require collaboration across functional groups. For those that require collaboration, managers should gather input from all of the stakeholders that have a role in executing the task to determine a consensus for the venue as a whole.
- **Scope the answers.** Considerable variation exists between different types of outdoor events, from large performance venues and amusement parks to parades and marathons. Therefore, users of the checklist should think about how they want to be able to achieve each task and then assess whether they are able to perform that task successfully.
- **Use the results.** The information gathered can illustrate and enhance successful efforts, identify additional opportunities to strengthen C-IED preparedness, and avoid redundant efforts. Additionally, a clear understanding of gaps enables managers to identify, prioritize, and justify key actions to take and equipment to purchase.

# Appendix 1: Outdoor Events Subsector C-IED Goals and Tasks Checklist

## C-IED goals and tasks checklist

The following table outlines a broader list of tasks, which align to the six goals described in the document in an operational checklist format.

C-IED Goals and Tasks	Response (Yes—Partial—No—N/A)
<b>Goal 1: Use and share risk information to guide IED-related physical security, law enforcement, and emergency response activities</b>	
Assess potential risks, including threats, vulnerabilities, and consequences, from an IED incident.	
Assess potential IED risks from activities and operations in the vicinity of an outdoor event.	
Support local, state, tribal, territorial, regional, and national efforts to analyze and assess IED risk and resilience.	
Maintain the routine exchange of IED-related security information—including alerts, attack indications and warnings, and advisories—among government and industry stakeholders and nearby businesses.	
Monitor and act upon industry and government IED-related threat information.	
Report unauthorized access to secure areas.	
Promptly share actionable alerts and messages with employees and visitors, as appropriate, in the event of an IED threat.	
During an IED event, communicate warnings (e.g., protective measures for evacuation or shelter in place) to employees and visitors.	
Provide information that could be associated with IEDs (e.g., individuals conducting surveillance) to local law enforcement.	
Provide evidence to appropriate authorities to support the collection of intelligence information with respect to potential IED threats.	
<b>Goal 2: Identify and report IED-related suspicious activity</b>	
Educate employees and visitors to recognize and report suspicious behavior, activities, and objects that could be associated with IEDs.	

# Appendix 1: Outdoor Events Subsector C-IED

## Goals and Tasks Checklist

C-IED Goals and Tasks	Response (Yes—Partial—No—N/A)
Recognize out-of-place and suspicious behavior (e.g., persons loitering near gathering areas wearing unusually bulky clothing that might conceal suicide explosives, suspicious or illegally parked vehicles near a gathering, or individuals conducting surveillance of the event) that may indicate planning or execution of an IED attack.	
Recognize out-of-place and suspicious objects (e.g., unattended packages or backpacks or vehicles illegally parked near an entrance) that could be IEDs.	
Recognize IED components, precursors, and suspect devices in common areas, such as such as choke points along a parade or marathon route, performance spaces, bathrooms, trash bins, and parking lots.	
Report information on suspicious activity and potential IED threats to appropriate authorities.	
Maintain control over explosives and explosive precursors of concern located within the event space (such as propane, cleaning supplies, and fireworks).	
<b>Goal 4: Implement site-specific protective measures to prevent and minimize the impact of IED incidents</b>	
Verify visitor credentials (e.g., tickets) for access to the event, as required.	
Issue badges to verify identity of full-time staff, temporary or visiting staff, and volunteers.	
Conduct continuous roving security patrols during events.	
Secure and control access to high-risk areas that require additional security, such as security offices, mechanical and storage areas, performance preparatory areas, and parking lots.	
Inspect security barriers such as locks, gates, and doors for signs of intrusion.	
Develop and implement protective security features, such as perimeter lighting and fences, and barriers that provide effective standoff distance from potential IED attacks and to prevent unauthorized access to the event.	
Develop and implement mitigation measures and blast-resistant design, especially in high-risk areas, to limit the effects of an IED detonation.	
Deploy assets (e.g., surveillance cameras and security personnel) to interior and exterior areas to interdict, deter, or disrupt IED threats from reaching potential target(s).	

# Appendix 1: Outdoor Events Subsector C-IED Goals and Tasks Checklist

C-IED Goals and Tasks	Response (Yes—Partial—No—N/A)
<b>Goal 5: Utilize IED screening and detection methods in high-risk environments</b>	
Screen visitors and inspect bags, including equipment bags and other containers, to detect suspicious objects that could be IEDs or IED components.	
Screen incoming deliveries to identify anything suspicious that could be associated with IEDs (e.g., strange odors, ticking sounds, or protruding wires).	
Screen full-time staff, temporary or visiting staff, and volunteers prior to employment and/or use.	
Conduct a security sweep throughout the event space before opening.	
<b>Goal 6: Take immediate safety precautions for bomb threats, suspicious items, and IEDs</b>	
Determine and implement appropriate protective measures (e.g., evacuation) for employees and visitors in the event of a known/suspected IED threat.	
Search for persons or objects associated with an IED threat.	
<b>Goal 7: Safely coordinate response activities at IED incident sites</b>	
Implement command structure to integrate multi-organizational operations with security staff during high-profile events.	
Implement established emergency operations plan to support C-IED functions/operations in response to an IED threat or successful detonation.	
Coordinate with local first responders during an IED threat or following an explosion to ensure unity of effort (e.g., event security should coordinate with law enforcement personnel responding to a report of an IED threat).	
Alert response personnel to potential hazardous materials near the suspected or detonated IED.	
Provide support to first responders, as requested by unified command and elected officials, following an IED detonation (e.g., command post, vehicle staging area, or medical services and triage).	

# Appendix 2: Outdoor Events Subsector C-IED Resources

The resources appendix provides a number of pre-existing guidance documents and products (e.g., posters, pamphlets, and guides) for outdoor event stakeholders who are interested in learning more about the C-IED tasks. Whenever possible, there is a link to the resource; to request those without a link (indicated with an asterisk), please contact OBP at [OBP@hq.dhs.gov](mailto:OBP@hq.dhs.gov).

Resource	Resource description
Identifying ammonium nitrate and urea-based fertilizers awareness	<a href="#">Awareness poster</a> that highlights the IED implications for ammonium-nitrate and fertilizer products that could be found within an outdoor events venue and used in a bomb.
Identifying indicators of a bomb-making laboratory	Awareness poster* that highlights potential indicators what a room might look like when used to construct a bomb.
Identifying explosive precursor chemicals	Awareness poster* that highlights the IED implications for chemical products that could be found within an outdoor events venue and used as an explosive precursor.
Identifying hazardous chemical materials	<a href="#">Awareness poster</a> that highlights the IED implications for hazardous chemical products that could be found within an outdoor events venue and used in a bomb.
Identifying peroxide materials	<a href="#">Awareness poster</a> that highlights the IED implications for peroxide products that could be found within an outdoor events venue and used in a bomb.
AWR-333: IED Construction and Classification	75-minute <a href="#">virtual instructor-led training</a> that provides public and private sector individuals a foundational knowledge on the construction and classification of IEDs.
Identifying a suicide bomber	Awareness poster* that highlights the potential behaviors and indicators of a suicide bomber.
Identifying a vehicle-borne IED (VBIED)	<a href="#">Awareness poster</a> that highlights potential indicators of a VBIED.
AWR-338: Homemade Explosives (HME) and Precursor Awareness	60-minute <a href="#">virtual instructor-led training</a> that provides public and private sector individuals a foundational knowledge on homemade explosives and common precursor materials that are used to make them.
TRIPwire program tutorial	<a href="#">Tutorial video</a> detailing DHS's TRIPwire program and the variety of C-IED resources available and how to sign up.
Bag check and suspicious item training	8-minute <a href="#">instructional video</a> on how to conduct bag checks and identify suspicious items.

# Appendix 2: Outdoor Events Subsector C-IED Resources

Resource	Resource description
Screening and searching vehicles	Vehicle <a href="#">inspection guide</a> that identifies safety procedures and best practices when screening vehicles entering venue.
Bomb threat guidance	<a href="#">Informational guide</a> to assist personnel in identifying critical steps and procedures to prevent and protect against a potential IED incident.
MGT-451: Bomb Threat Management Planning Course	8-hour <a href="#">in-person training</a> that provides participants a foundational knowledge of the DHS risk management process.
PER-336: Protective Measures Course	8-hour <a href="#">in-person training</a> that provides participants foundational knowledge on facility vulnerability, C-IED protective measures, and strategies that can be used to mitigate risk and reduce vulnerabilities within their unique sector.
PER-346: Surveillance Detection Course for Law Enforcement and Security Professionals	3-day <a href="#">in-person training</a> that provides public and private sector security professionals with instructions on how to detect hostile surveillance by exploring surveillance techniques, tactics, and procedures from an adversary's perspective; these skills enhance C-IED capabilities to detect, prevent, protect against, and respond to IED threats.
PER-310: VBIED Detection Course	8-hour <a href="#">in-person training</a> that improves participant's ability to successfully inspect for, detect, identify, and respond to a VBIED; instruction covers the VBIED threat, explosive effects, IEDs, and vehicle inspections, enabling participants to detect, deter, and protect against the illicit use of explosives.
AWR-348: Bombing Prevention Awareness Course	8-hour <a href="#">in-person training</a> that provides participants knowledge of general bombing prevention measures that aid in the prevention of a bombing incident, identification of protective measures, and mitigation of IED impacts.
AWR-335: Response to Suspicious Behaviors and Items	60-minute <a href="#">virtual instructor-led training</a> that provides participants with an awareness of the indicators of suspicious behavior and the preventative responses to suspicious behaviors and/or items.
IS-914: Surveillance Awareness: What You Can Do	60-minute <a href="#">Web-based training</a> that provides an overview of surveillance activities and how employees and service providers can identify and report potential surveillance incidents.
Training course on IEDs, package inspection and mail room procedures	2-day <a href="#">in-person training</a> that provides participants a basic understanding of explosives, IEDs; package handling, mail room procedures and bomb threats; vehicle bombs and inspections.

# Appendix 2: Outdoor Events Subsector C-IED Resources

Resource	Resource description
AWR-340: Protective Measures Awareness	60-minute <a href="#">virtual instructor-led course</a> that provides participants foundational knowledge on risk management, surveillance, and various protective measures.
Conducting visitor screening	<a href="#">Informational guide</a> that identifies best practices for screening visitors.
AWR-337: IED Explosive Effects Mitigation	60-minute <a href="#">virtual instructor-led training</a> that introduces participants to the effects of an explosive blast and security measures and best practices that can help prevent or mitigate explosive effects.
PER-346: Surveillance Detection Course for Law Enforcement and Security Professionals	3-day <a href="#">in-person training</a> that provides public and private sector security professionals instructions on how to detect hostile surveillance by exploring surveillance techniques, tactics, and procedures from an adversary’s perspective; these skills enhance C-IED capabilities to detect, prevent, protect against, and respond to IED threats.
Steps to take when receiving a bomb threat	4-minute <a href="#">informational video</a> describing what steps to take in the event of receiving a bomb threat.
Recording information during a phoned in bomb threat	<a href="#">Informational guide</a> on what information to record in the event of receiving a bomb threat by phone.
Minimum evacuation distance for an IED incident	<a href="#">Informational poster</a> that details the recommended minimum evacuation distance for IED incidents of different magnitudes.
PER-339: IED Search Procedures Course	8-hour <a href="#">in-person training</a> that provides participants foundational knowledge of search safety procedures and the opportunity to practice live searches of a facility, an area, and a route.
AWR-341: IED Awareness and Safety Procedures Computer-Based Training	60-minute <a href="#">Web-based training</a> that provides participants with foundational knowledge concerning IEDs and proper safety precautions and procedures for reacting and responding to unattended and suspicious items.
